- ✓ Say No 19 In USE Surface Sanitiser Wipes
- ✓ Say No 19 Non-Alcohol Hand Sanitiser
- ✓ Say No 19 Non-Alcohol Personal Hand Sanitising Wipes

BioChem Solutions Ltd is pleased to announce it's Say No 19 range has gained **approval against Covid-19** by the internationally renowned BluTest Laboratories (UK) with a **99.99% effectiveness** in 1 minute in DIRTY conditions. The tests undertaken were BS EN 14476:2013 and A2:2019. These tests are what are specified by the TGA to make claims against Covid-19.

Simon Wright, the Director of BioChem Solutions said to the best of our knowledge this is New Zealand's first tested and approved product range that has been developed, designed and manufactured right here in Auckland.

Our chief formulator Robert Green has spent years developing the formulations and has put them through their paces. He has said "most of the approvals I see in the market are tested under clean conditions with a dwell time of up to 10 minutes to work. I thought we could do better than that, which is why I tested our formulations under DIRTY conditions for 1 minute. Testing should be carried out in real world conditions, so the marketing department can make claims that are able to be substantiated, so consumers have confidence the product they are using works."

We are proud we are leading the world in effective testing in real world conditions and manufacturing right here in New Zealand. It is important to us that we maintain the integrity of products used here and keep the supply chain secure so we are not reliant on foreign and imported products.
